

meeting notes 6.28

Topic: 2 ways of using registry data as external control in clinical trial for rare diseases: N of 1 trial & causal case control

N of 1 trial:

single case/ multiple case; series N of 1

relate to registry data: Extract patients infos from the registry with similar sequence of treatments

Causal case control:

Different from case control study that we select cases and controls retrospectively, the cases are prospectively selected and controls are retrospectively selected.

Todo list:

1. registry data request: send email for further guidance of the infos of registry data request
2. relevant reading of causal case control study
